www.linkedin.com/in/ankit-mondal-041119152

CORE COMPETENCIES

- Software Development Life Cycle
- Agile/Scrum Methodologies
- Project Management
- Cross-Functional Team Collaboration
- System Architecture Design
- Performance Optimization Strategies
- Security Protocols and Best Practices
- Data Migration Techniques
- User Experience Enhancement
- Continuous Integration and Deployment
- Application Scalability Solutions

TECHNICAL SKILLS

- Python, TypeScript
- Flask, SQLAlchemy, NestJS, Angular
- Postgres, Redis, Elastic Search, DynamoDB, MongoDB
- Keycloak, Git, ADO, AWS Lambda, S3, MSK, batchjob, API Gateway, CDK Stack, Nginx, uwsgi, Docker

EDUCATION

2020: MCA, NIT Jamshedpur

2017: B.Sc. (Maths) from Ashutosh College, University of Kolkata

PERSONAL DETAILS

- **Date of Birth:** 12th December 1995
- **Languages Known:** English, Bengali & Hindi
- **Address:** Gurgaon, Haryana

ANKIT MONDAL

Senior Software Developer

PROFILE SUMMARY

- Amassed close to **5 years** of extensive experience in **software development**, focusing on the **logistics and supply chain industry** while showcasing proficiency in multiple programming languages and frameworks.
- Lead the role of **Senior Software Developer within the Core Technology Team at Delhivery Private Limited**, concentrating on crafting and executing scalable software solutions to improve operational efficiency.
- Progressed through various roles, starting as an intern and advancing to a senior position, acquiring a robust skill set in **software development life cycle (SDLC)**, **agile methodologies**, and cross-functional collaboration.
- Realized substantial enhancements in system performance and security by effectively implementing a **microservice architecture**, leading to an impressive 80% decrease in incidents of credential compromise.

WORK EXPERIENCE

Since Jan'20 | Delhivery Private Limited, Gurgaon

Growth Path:

Jan'20 – Jul'20 as
Intern

Jul'20 – Mar'22 as
Software Developer

Since Mar'22 as Senior
Software Developer

Key Result Areas:

- **End-to-End SDLC Ownership:** Lead the complete software development lifecycle including requirement analysis, design, development, testing, deployment, and maintenance of scalable and high-performance applications.
- **Agile/Scrum Execution:** Actively participate in daily stand-ups, sprint planning, backlog grooming, and retrospectives, ensuring timely delivery of sprint goals and continuous collaboration with cross-functional teams.
- **Project Planning & Estimation:** Collaborate with stakeholders and project managers to define scope, estimate effort, allocate resources, and track project progress to ensure timely and quality deliverables.
- **Code Quality & Technical Leadership:** Drive coding best practices, perform code reviews, mentor junior developers, and ensure adherence to architectural standards, design patterns, and security guidelines.

PROJECTS

Project: User Management System (UMS) – Authentication & Authorization Microservice

- **Designed and developed a centralized microservice** for authentication and authorization, acting as a single access point for all internal applications at Delhivery.
- **Integrated Keycloak with OIDC and OAuth2**, standardizing identity management and eliminating custom integrations for downstream services via unified backend and frontend auth libraries.
- **Enhanced system performance and scalability**, enabling UMS to handle 2 lakh+ requests per minute (RPM) with minimal latency and improved SLA benchmarks.
- **Implemented advanced security features** such as 2FA (as part of MFA) and device-based authentication for mobile apps, reducing fraud and credential compromise incidents by 80%.
- **Led infrastructure ownership**, ongoing site maintenance, and feature development while also working on multi-tenancy implementation for client-specific authentication flows.

Project: Facility as a Service (FaaS) – Facility & Property Management Platform

- **Built a scalable microservice platform** for managing all facilities, client warehouses, and property data across Delhivery, improving operational visibility.
- **Seamlessly migrated infrastructure** from Singapore to Mumbai AWS region with zero downtime, reducing cloud infrastructure costs by ~20%.
- **Improved data write performance** by migrating from PostgreSQL to DynamoDB, reducing write latency by 70% while maintaining data integrity.
- **Enhanced search performance** by implementing Search After and Point-in-Time (PIT) queries using Elasticsearch for better pagination and faster response times.
- **Scaled the system horizontally** to handle 1.5 lakh RPM with reduced API latency from 28ms to 12ms, ensuring high availability and performance.
