Gurugram, India

A Master of Computer Applications graduate from NIT Jamshedpur with **~5 years of professional experience**, currently working as a **Senior Software Developer** in the **Core Technology Team** of **Delhivery Private Limited**. Consistently demonstrated strong problem-solving and programming skills, along with the ability to collaborate with cross-functional teams to deliver high-quality software solutions.

WORK EXPERIENCE**Delhivery Private Limited**

Gurugram, India

Job Title: Senior Software Developer (July' 2020 – Present)

Project: User Management system (UMS):

- Developed a micro service which serves the purpose of authentication and authorization to downstream services. This project is single access point for all existing applications in Delhivery
- Independently managed and maintained project infrastructure, performed site maintenance, and swiftly developed new features based on evolving requirements
- Integrated all services across Delhivery with **Keycloak** which works on Oauth2 architecture along with OIDC as identity provider.
- Eliminating integration overhead for downstream applications through a unified backend(**Resource Registration flow**) and frontend(**auth library**) library
- Worked on building UMS (IAM service) to a highly scalable system with decreased latency and improved SLA, hence today UMS handles highest throughput (**avg. 2L RPM**) with least possible latency
- Implement **2FA(as a part of MFA)** for all applications, **Device Authentication Flow** for all mobile applications which reduced the credential compromise and fraud incident by around 80%
- Working on adding **Tenancy** for client authentication flow

Project: Facility as a Service (FaaS):

- Developed a micro service and a single platform to store all the facilities, properties and client-warehouses related details
- Successfully completed application migration from **Singapore** to **Mumbai** region without downtime which reduced infra cost by around 20%
- Successfully migrated FaaS from **Postgres** to **DynamoDB** which reduced write latency by 70%
- Introduced **Search After** and **PIT** with elastic search
- Scaled up the application horizontally to handle large throughput (**avg 1.5L RPM**) with latency reduction from 28ms to 12ms

Tech stack:

- Python, TypeScript
- Flask, SQLAlchemy, NestJS, Angular
- Postgres, Redis, Elastic Search, DynamoDB
- Keycloak, Git, ADO, AWS Lambda, S3, MSK, batchjob, API Gateway, CDK Stack, Nginx, uwsgi, Docker etc.
